

SHIPPING & LOGISTICS MANAGEMENT SYSTEM *(SLMS)*

An intelligent platform connecting warehouses, carriers, drivers, and customers

Group 304

João Roldão (113920)

Hugo Castro (113889)

Hugo Sousa (112733)

Henrique Teixeira (114588)

João Varela (113780)

Index

Team Members	Introduce the team and roles
Problem	Establish the business context and pain points
User Stories & Personas	Show scope and stakeholder coverage
Core Features	Key features of the SLMS platform
System Architecture	Technical architecture and tech stack
Live Demo	Demonstrate working system across all applications
How We Achieved This	Engineering practices, CI/CD, QA, observability
Conclusion	Summarize achievements and invite questions

Team Members

Name	Role
João Roldão	Scrum Master
Hugo Castro	Product Owner
Hugo Sousa	QA Engineer
João Varela	DevOps Master
Henrique Teixeira	Service Analyst

Problem

Companies *(Logistics Managers & Warehouse Staff)*

fragmented systems & no visibility

Drivers

inefficient routes & paper-based delivery

Customers

no real-time tracking

Customer Service Representatives

overloaded with simple requests

User Stories & Personas

Scope

- 5 Personas
- 18 User Stories
- End-to-end logistics flow

Personas

Logistics Manager •
Warehouse Staff •
Customer Service •
Driver •
Customer •

Core Features

Orders & Warehouse

- Order creation & validation
- Shipping labels & docs
- Carrier pickup confirmation

Customer Service

- Fast order search
- Exception handling
- Resolution tracking

Delivery & Drivers

- Daily delivery list
- Route navigation
- Proof of delivery

Management

- KPI dashboards
- Carrier comparison
- Report exports

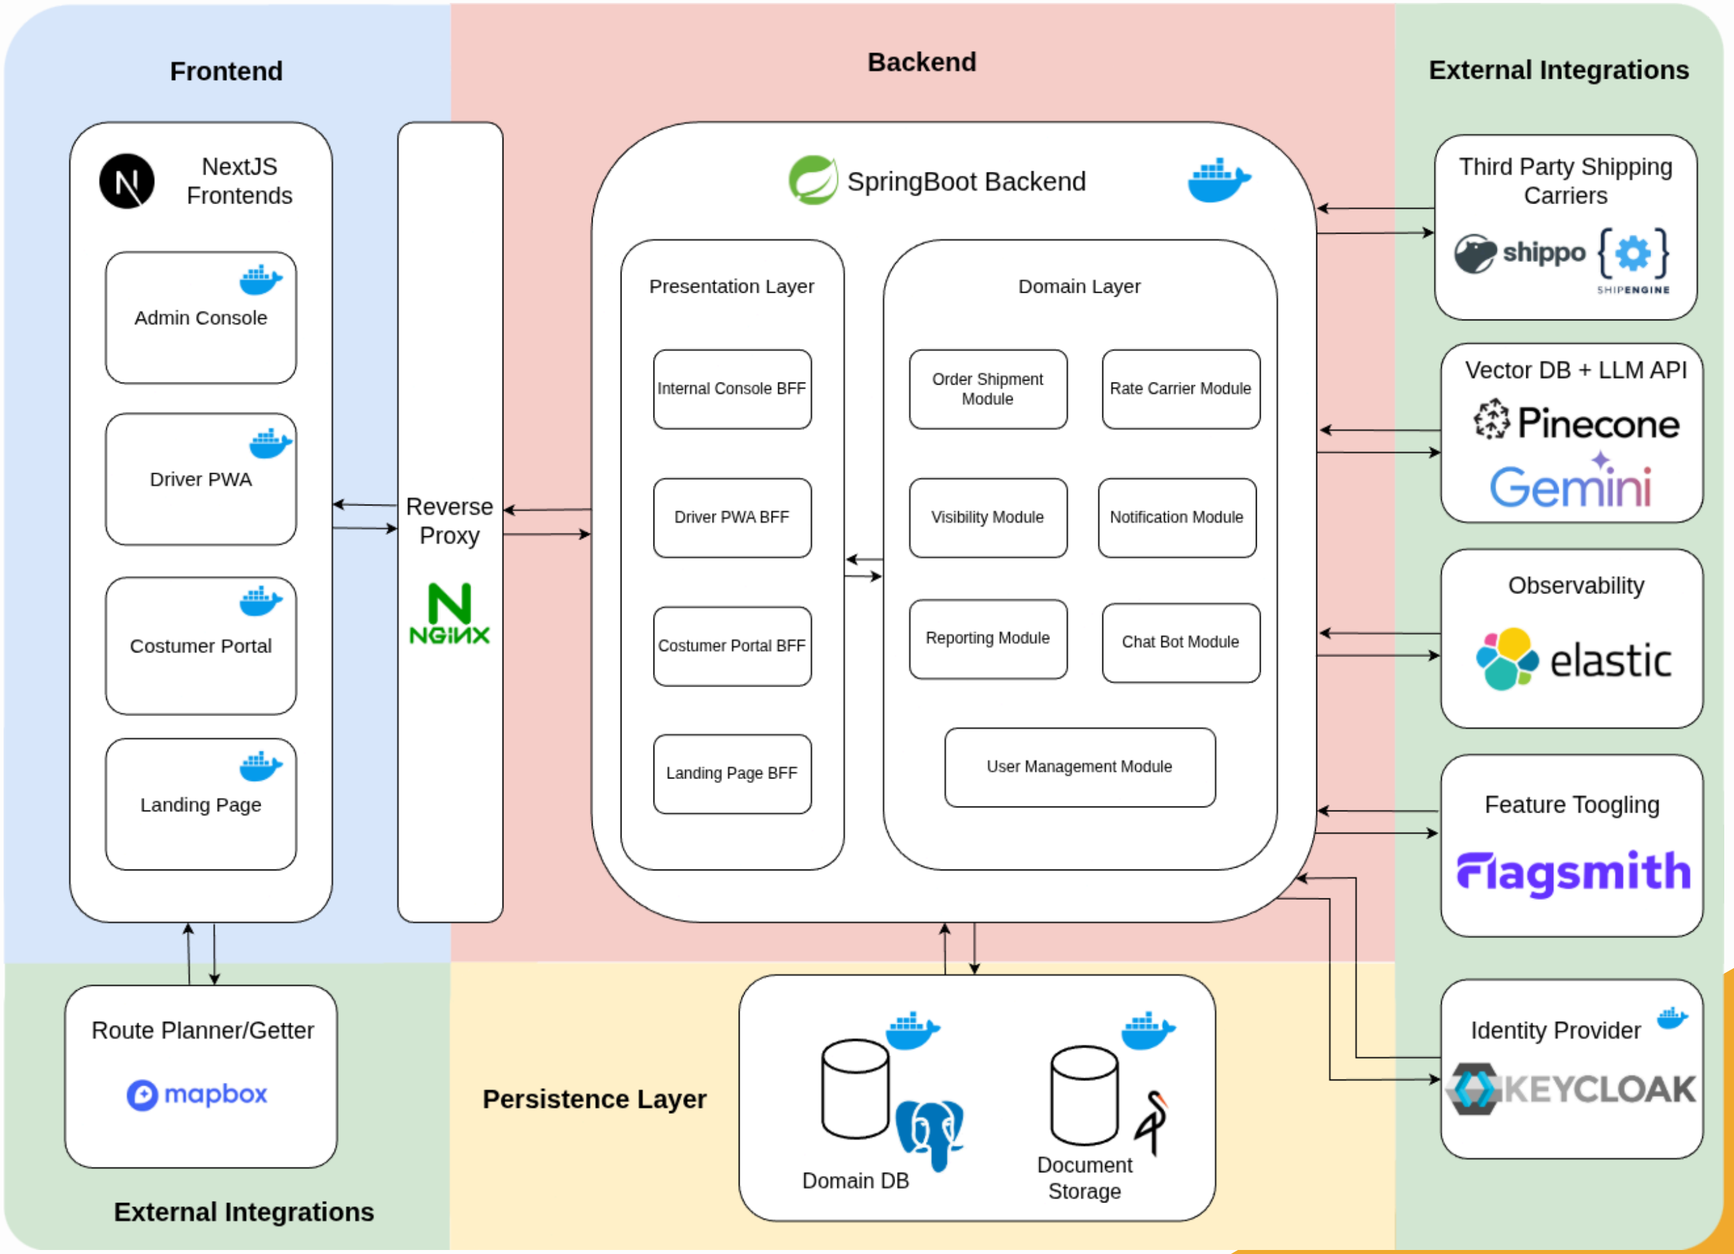

Customers

- Real-time tracking
- Status notifications
- Issue reporting

Management

- Natural language queries
- Real-time data access
- Role-aware answers

System Architecture

Live Demo

End-to-End Delivery Story

How We Achieved This

Development Flow

GitHub Flow

135 PRs

171 Issues

Testing

70% test coverage

Unit tests
Integration tests
E2E tests

How We Achieved This

CI/CD Automation

CI - Code Quality and Test Integration

CD - Deploy in AWS

Terraform Infrastructure

Observability

Elastic APM

Frontend & Backend Monitoring

SLI/SLO Definitions

Conclusion

What We Delivered

- 18/18 user stories
- 4 production-ready apps
- AI-powered assistance
- Full CI/CD & monitoring

SLMS = not a prototype, a real system

Questions?

Thank you for your time and attention.
